 Black, White, Chrome,  
 Gold and Satin Silver.  
 Spyhole can also be  
 included in urn & slimline

# Tech Specs

- All panels can be cut to size
- All glazed panels are press sealed with high impact tape that leaves no need for silicone around glass
- All glass is toughened as standard
- Panels available in 20, 24, 28, 32, 36 & 40 mm
- All glass designs are done in-house
- Bespoke glass designs available
- Sidelights and toplights can be made to suit all glass designs
- Toplight and sidelight glass sealed with aluminium spacer in silver or bronze
- All door panel glass sealed with Warm-Edge superspacer
- Panels available in a range of colours e.g. Cream, Blue, Red and Green
- Every effort has been made to reproduce the colour in this brochure although due to printing constraints, colours may vary
- Panels supplied with polystyrene core, single MDF, double MDF and solid MDF

These are also a great way of saving you time and money.

Standard depth: 80mm at the sides  
 Other designs/shapes available upon request  
 Can be manufactured in any colours i.e. white, woodgrain, oak, black etc.

Simply measure the glass size and how deep you want the arch to go and then when you are glazing the window, simply silicone the back of the sash arches and place them on to the glass. It is as simple as that for a very realistic arch in a window.

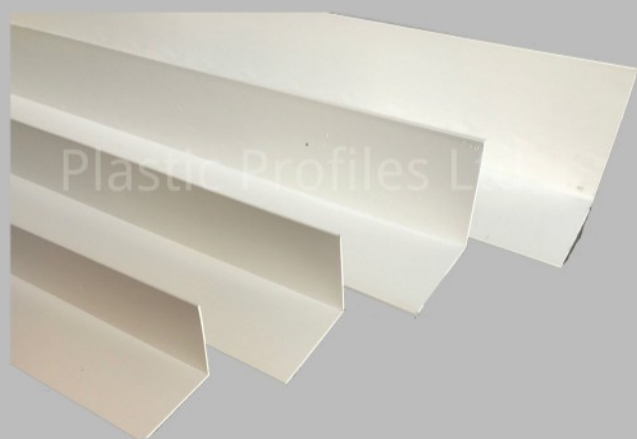

Easy-Clad is a revolutionary way of cladding around conservatories, sunlounges, baypoles or corner windows.

You simply get the exact shape and size that you need and place your order.

Fit the cladding when you are installing the windows and it will save you time and money as everything is done at once.

Example of 'V' Grooves that are routed into the PVC sheets to make them easy to bend around bay-poles

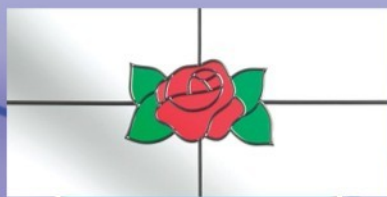

All cladding can be cut in white, woodgrain, oak, black, cream etc.  
 Maximum height of cladding is 2000mm

Astragal Bars can be manufactured in either MDF for a wooden door or uPVC for PVC or composite doors.

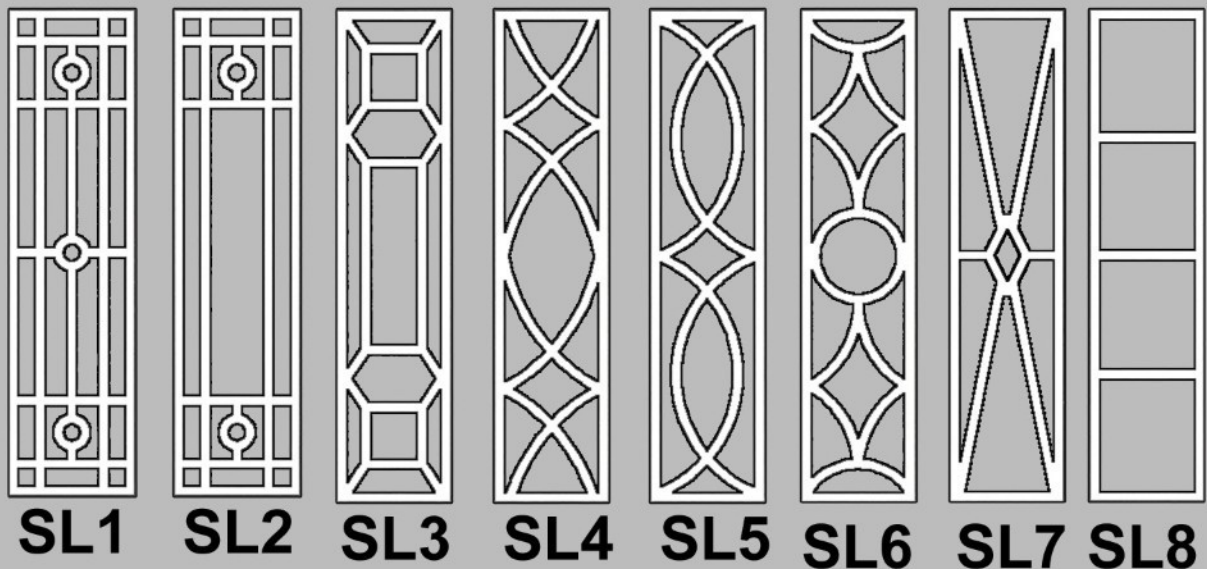

uPVC Astragal Bars are manufactured from 1.5mm PVC, they can be supplied in white, woodgrain, oak, rosewood, black, cream (other colours are available upon request).

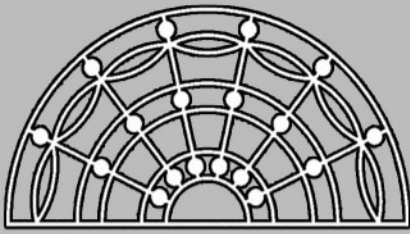

MDF astragal bars are made from 12 or 18mm thick MDF, they are supplied unpainted and exterior grade used for outside and interior grade used for inside.

These bars are stuck onto the middle pane of a triple glazed unit making them very easy to clean. Astragal bars are cut to any thickness ie. 18 or 25mm

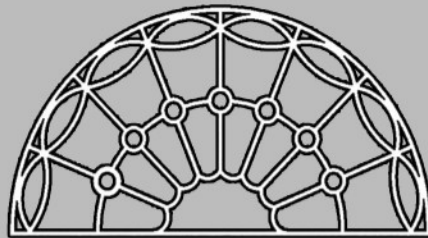

uPVC panels can also be manufactured with astragal bar glass.
